सर/ मैडम,
आविनय विवेकन है कि मेरा बेटा विशु
जिसकी उम्र चार साल है, उसको बहुत कैंसर
व ऑनको का कैंसर है। मैं उसका पिछले साल
जून से सैलक में इलाज करा रहा था। लेकिन
पिछले मई माह में उसे सेक्स दिल्ली
दुबिफर कर दिया गया है। मैं बहुत गरीब हूँ
वह व मजदूरी करके आपने परिवार का पालन
पोषण करता हूँ लेकिन इस समय आपने लगे
के इलाज की वजह से मैं काम नहीं कर सकता
पूरा कृपया मेरी मदद करें।

~~धन्यवाद~~
धन्यवाद

आपका आभारी

M.R. OF THE BRAIN AND ORBITS WITH CONTRAST

Axial T1, DWI and FSE T2 weighted scans of the brain were studied and these were correlated with coronal T2, fat sat T1 & T2 weighted scans including both orbits. Additional T1 weighted axial, coronal & sagittal scans were obtained following administration of contrast (10ml. Omniscan). No immediate adverse contrast reaction was noted.

Follow up case of T-ALL. Previous scans / records are not made available for comparative evaluation.

Large mass lesion is seen in the right orbit measuring 45 x 30 x 35 mm. Lesion is seen infiltrating the right extraocular muscles and encasing the right optic nerve. Right globe is displaced anteriorly with possible retinal detachment. Posteriorly, there is intracranial extension of the lesion through the right optic canal. Intracranial extradural soft tissue component measures 25 x 20 mm and is seen in the sellar and suprasellar region, involving the optic chiasma. Lesion shows hypointense signal on T1 and hyperintense signal on T2 weighted images. There is heterogeneous enhancement following administration of contrast. Bilateral cavernous sinuses are bulky (R>L). Nodular meningeal enhancement is seen along bilateral frontal and temporal lobes. Findings are suggestive of ?leukemia deposit.

Left globe and left optic nerve is unremarkable.

Cerebral and cerebellar parenchyma is otherwise unremarkable. No acute infarct is seen on diffusion weighted images.

Bilateral basal ganglia and thalami are normal in signal intensity.

The corpus callosum and skull base are normal. No midline shift. No acute intracerebral hemorrhage.

Brainstem is unremarkable. Skull base arteries demonstrate normal flow void.

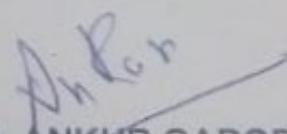

Mucosal thickening is seen in bilateral maxillary and ethmoid sinuses.

IMPRESSION:

- Large heterogeneously enhancing mass lesion (45 x 30 x 35 mm) in the right orbit, infiltrating the right extraocular muscles and encasing the right optic nerve with intracranial extension as described.
- Bilateral cavernous sinuses are bulky (R>L).
- Nodular meningeal enhancement along bilateral frontal and temporal lobes.

Findings are suggestive of ?leukemia deposit.

Clinical correlation is necessary

DR. ANKUR GADODIA
MD (AIMS), DNB, FRCR (UK)

This is a professional opinion and not the diagnosis. Findings should be clinically correlated.

Facilities Available : 3.0 Tesla GE Pioneer MRI, 32 Slice CT Scan, Bone Densitometry (DEXA), Ultrasound with Color Doppler, Digital X-Ray, Echocardiography, ECG, PFT, EEG, NCV, EMG, Pathology Lab (NABL & NABH Accredited)
